SUMMARY

Dedicated and passionate software developer with hands-on experience in Python, .NET (C#), and database systems like SQL Server and MySQL. Skilled in building web and desktop applications, backend API development, and secure data handling. A quick learner and strong team player, committed to delivering high-quality, user-friendly, and efficient software solutions.

PROJECTS

Jay Smart Bank

Language/Platform: C#

- Developed a desktop banking application focused on innovative financial services, user accessibility, and highly secure transactions.

Jay Smart Innovative Banking Association

Language/Platform: ASP.NET

- Built a robust web-based system for banking association management, optimizing real-time operations, efficiency, and data security.

Course Enrollment System

Language/Platform: Java (Desktop Application)

- Designed and developed a system for students to enroll in courses, view schedules, and track academic progress.
- Implemented role-based access for students and administrators.
- Integrated backend database for managing courses, users, and enrollments efficiently.
- Focused on usability, data validation, and secure login/logout mechanisms.
